Overview - Revised Basel III Implementation

Revised Basel III Reforms

Effective February 1, 2023, the Bank has adopted the Revised Basel III reforms in accordance with OSFI's revised Capital Adequacy Requirements Guideline, Leverage Ratio Requirements Guideline, and Pillar 3 Disclosures Guideline for D-SIBs. OSFI's requirements are substantially aligned with the BCBS' Revised Basel III reforms with some differences, primarily in residential real estate and qualifying revolving retail exposures, and with respect to the phase-in period of the aggregate capital output floor to 72.5%.

The final Basel III reforms implemented in Q2 2023 primarily impact the calculation of risk-weighted assets and include:

- A revised standardized approach for credit risk, with increased granularity of prescribed risk weights for credit cards, mortgages and business loans.
- Revisions to the internal ratings-based approach for credit risk with new requirements for internally developed model parameters under the Advanced Internal Ratings-Based Approach (AIRB), including scope restrictions which limit certain asset classes to only the Foundation Internal Ratings-Based (FIRB) approach.
- A revised standardized approach for operational risk, which builds on the existing standardized approach including the recognition of an institution's operational risk loss experience.
- Revisions to the measurement of the Leverage ratio and a Leverage ratio buffer, which will take the form of a Tier 1 capital buffer set at 50% of a D-SIB's 1.0% risk-weighted surcharge capital buffer.
- An aggregate output floor, which will ensure that banks' RWAs generated by internal models are not lower than 72.5% of RWAs as calculated by the Basel III framework's standardized approaches. There is an international phase-in period for the 72.5% aggregate capital output floor from 2023 until 2028, beginning at 65% for Canadian banks in Q2, 2023.
- Revised credit valuation adjustment framework (CVA) and Fundamental Review of the Trading Book (FRTB) market risk requirements effective November 1, 2023.

Internationally, adoption of the revised Basel III reforms is varied across jurisdictions. While a number of BCBS members have finalized their revised Basel III reforms guidelines, delays continue to persist in several key jurisdictions.

OSFI's Pillar 3 Disclosure Requirements

This Appendix disclosure is based on OSFI's Pillar 3 disclosure requirements, including subsequently issued Total Loss Absorbing Capital (September 2018), and OSFI Capital Adequacy Requirements Guidelines (November 2025), and Leverage Ratio Guidelines (February 2023) and Pillar 3 Disclosure Guideline (February 2025), which are primarily sourced from the BCBS' Revised Pillar 3 disclosure requirements and its Technical Amendment to Regulatory Treatment of Accounting Provisions. This document is not audited and should be read in conjunction with our 2025 Annual Report and Q2 2026 Quarterly Report.

Overview (continued)

Effective February 1, 2023, Canadian banks are subject to the revised capital adequacy requirements as published by the Basel Committee on Banking Supervision (BCBS) and commonly referred to as revised Basel III, as per OSFI's Capital Adequacy Requirements Guideline (CAR).

Basel III classifies risk into three broad categories: credit risk, market risk and operational risk. Under Pillar 1 of the Basel III Framework, minimum capital for these three risks is calculated using one of the following approaches:

- Credit risk capital – Internal Ratings Based Approach (Advanced or Foundation) and the Standardized Approach.
- Operational risk capital – Standardized Measurement Approach to Operational Risk.
- Market risk capital - Internal models and/or Standardized Approaches.

Credit Risk

The credit risk component consists of on- and off- balance sheet claims. The Basel III rules are not applied to traditional balance sheet categories but to categories of on- and off- balance sheet exposures which represent general classes of assets or exposure types (e.g. Large Corporate, Mid-size Corporate, Small and Medium Enterprise, Sovereign, Bank, Retail Mortgages, Other Retail, Equity, etc.,) based on their different underlying risk characteristics. Generally, while calculating capital requirements, exposure types are analyzed by the following credit risk exposure sub-types: Drawn, Undrawn, Repo-style Transactions, Over-the-counter (OTC) Derivatives, Exchange Traded Derivatives and Other Off-balance Sheet claims. OSFI approved the Bank's use of the Advanced Internal Ratings Based (AIRB) approach for credit risk in its material Canadian, US and European portfolios and for a significant portion of international corporate and commercial portfolios and Canadian retail portfolios. The Bank uses internal estimates, based on historical experience, for probability of default (PD), loss given default (LGD) and exposure at default (EAD). As described in CR2 of this Supplementary Regulatory Capital Disclosure, the definition of regulatory capital default is consistent with the accounting definitions described in the Bank's annual report.

- Under the IRB approach, credit risk risk-weighted assets (RWA) are calculated by multiplying the capital requirement (K) by EAD times 12.5, where K is a function of the PD, LGD, maturity and prescribed correlation factors. This results in the capital calculations being more sensitive to underlying risks.
- Under revised Basel III there are new IRB requirements for internally developed model parameters under AIRB including scope restrictions which limit certain asset classes to only the Foundation Internal Ratings Based (FIRB) approach.
- For those asset classes (e.g. Large Corporates, Banks, etc.) the FIRB utilizes the Bank's internally modeled PD parameters combined with internationally prescribed EAD and LGD parameters.
- The standardized approach applies regulator prescribed risk weight factors to credit exposures based on the external credit assessments (public ratings), where available, and also considers other additional factors (e.g. loan-to-value for real estate secured, eligible collateral, allowances, etc.)
- Under revised Basel III, the revised standardized approach for credit risk includes increased granularity of prescribed risk weights for credit cards, mortgages and business loans.
- Risk weights for exposures falling under the Securitization Framework are mainly computed under the following approaches: the Internal Ratings Based Approach (IRBA), External Ratings-Based Approach (ERBA), Standardized Approach (SA), or the OSFI approved Internal Assessments Approach (IAA).

- IRBA risk weights are only applicable to retained exposures to securitizations of Bank originated receivables utilizing the Bank's existing OSFI approved AIRB model parameters.
- ERBA risk weights for other banking book exposures depend on the external ratings provided by the external credit assessment institutions (ECAI): S&P, Fitch, and DBRS and are risk-weighted based on prescribed percentages incorporating effective maturity and STC (Simple, Transparent, Comparable) criteria, a mapping process consistent with OSFI's CAR.
- SA risk weights for banking book securitization exposures not qualifying for IRBA and without external ratings and not qualifying for ERBA.
- IAA risk weights for exposures to our asset-backed commercial paper conduits are based on a rating methodology similar to the criteria that are published by ECAs and therefore are similar to the methodologies used by these institutions. Our ratings process includes a comparison of the available credit enhancement in a securitization structure to a stressed level of projected losses. The stress level used is determined by the desired risk profile of the transaction. As a result, we stress the cash flows of a given transaction at a higher level in order to achieve a higher rating. Conversely, transactions that only pass lower stress levels achieve lower ratings. We periodically compare our own ratings to ECAs ratings to ensure that the ratings provided by ECAs are reasonable. We have developed asset class specific criteria guidelines which provide the rating methodologies for different asset classes. The guidelines are reviewed periodically and are subject to a model validation process, for compliance with Basel rules. The Bank's Global Risk Management (GRM) is responsible for providing risk assessments for capital purposes. GRM is independent of the business originating the securitization exposures and performs its own analysis, sometimes in conjunction with but always independent of the applicable business.

Operational Risk

In January 2020, OSFI revised its capital requirements for operational risk in consideration of the final Basel III revisions published by the BCBS in December 2017. OSFI required the implementation of the revised standardized approach for operational risk in Q2 2023, which replaced the existing standardized approaches and the advanced measurement approaches. The revised standardized approach builds on the existing gross income approach including a scalar or internal loss multiplier (ILM) that recognizes an institution's operational risk loss experience.

Market Risk

Starting Q1 2024, the Bank implemented the revised Basel III market risk framework from a Fundamental Review of the Trading Book (FRTB). The Bank uses standardized approaches to calculate market risk capital.

Total Loss Absorbing Capacity (TLAC)

Effective November 1, 2021, D-SIBs are required to maintain a minimum risk-based TLAC ratio and a minimum TLAC leverage ratio. TLAC is defined as the aggregate of Tier 1 capital, Tier 2 capital, and other TLAC instruments that are subject to conversion in whole or in part into common shares under the CDIC Act and meet all of the eligibility criteria under the guidelines. The Bank's minimum TLAC ratio requirements consist of 21.5% of risk-weighted assets (plus a Domestic Stability Buffer requirement) and 7.25% of leverage ratio exposures. OSFI may subsequently vary the minimum TLAC requirements for individual D-SIBs or groups of D-SIBs.

This "Supplementary Regulatory Capital Disclosure" including the main features template that sets out a summary of information on the terms and conditions of the main features of all capital instruments is posted on the Bank's website as follows:
<http://www.scotiabank.com/ca/en/0,,3066,00.htm>

(1) IRB Exposure at default is post credit risk mitigation. Standardized Exposure at default is after related IFRS 9 (ECL Stage 3) allowances for credit losses, and the collateral impact under Comprehensive Approach.

Residential Mortgages include insured mortgages.

(2) Risk-weighted Assets used for calculation of CET1, Tier 1, and Total Capital ratios.

(3) This includes Equity investments, Equity Investment in Funds and Significant Investments.

(4) Others includes Letter of Credits and Guarantees, Off Balance Sheet Securitization and Other Assets.

Summary of Qualitative Requirements - Pillar III (Cross Referenced)

Item #	Pillar III - Requirements - Qualitative	Frequency	2025 Annual Report: MD&A	2025 Annual Report: Financial Statements	Regulatory Capital Supplementary Package	Financial Reporting Supplementary Package
			Page Reference			
Part 2 - OVA – Bank risk management approach		Annual				
Banks must describe their risk management objectives and policies, in particular:		Annual				
(a)	How the business model determines and interacts with the overall risk profile (eg the key risks related to the business model and how each of these risks is reflected and described in the risk disclosures) and how the risk profile of the bank interacts with the risk tolerance approved by the board.	Annual	76 - 115			
(b)	The risk governance structure: responsibilities attributed throughout the bank (eg oversight and delegation of authority; breakdown of responsibilities by type of risk, business unit etc); relationships between the structures involved in risk management processes (eg board of directors, executive management, separate risk committee, risk management structure, compliance function, internal audit function).	Annual	76 - 81			
(c)	Channels to communicate, decline and enforce the risk culture within the bank (eg code of conduct; manuals containing operating limits or procedures to treat violations or breaches of risk thresholds; procedures to raise and share risk issues between business lines and risk functions).	Annual	76 - 81			
(d)	The scope and main features of risk measurement systems.	Annual	76 - 91, 96 - 101, 112 - 115			
(e)	Description of the process of risk information reporting provided to the board and senior management, in particular the scope and main content of reporting on risk exposure.	Annual	76 - 83, 96 - 104			
(f)	Qualitative information on stress testing (eg portfolios subject to stress testing, scenarios adopted and methodologies used, and use of stress testing in risk management).	Annual	82-83, 96-104			
(g)	The strategies and processes to manage, hedge and mitigate risks that arise from the bank’s business model and the processes for monitoring the continuing effectiveness of hedges and mitigants.	Annual	76-92, 100-101	153-167, 175-184		
Part 3 - LIA – Explanations of differences between accounting and regulatory exposures amounts		Annual				
Banks must explain the origins of the differences between accounting amounts, as reported in financial statements amounts and regulatory exposure amounts, as displayed in templates LI1 and LI2.		Annual				
(a)	Banks must explain the origins of any significant differences between the amounts in columns (a) and (b) in LI1.	Annual				LI1
(b)	Banks must explain the origins of differences between carrying values and amounts considered for regulatory purposes shown in LI2.	Annual				LI2
(c)	In accordance with the implementation of the guidance on prudent valuation (see [CAR 2023, Chapter 9, Section 9.4]), D-SIBs must describe systems and controls to ensure that the valuation estimates are prudent and reliable. Disclosure must include:	Annual				
	• Valuation methodologies, including an explanation of how far mark-to-market and mark-to-model methodologies are used.	Annual	89-91	157, 168-173, 175-180		
	• Description of the independent price verification process.	Annual		170		
	• Procedures for valuation adjustments or reserves (including a description of the process and the methodology for valuing trading positions by type of instrument).	Annual		154-167, 179		

Summary of Qualitative Requirements - Pillar III (Cross Referenced)

Item #	Pillar III - Requirements - Qualitative	Frequency	2025 Annual Report: MD&A	2025 Annual Report: Financial Statements	Regulatory Capital Supplementary Package	Financial Reporting Supplementary Package
(d)	D-SIBs with insurance subsidiaries must disclose:					
	- The national regulatory approach used with respect to insurance entities in determining a D-SIB's reported capital positions (ie deduction of investments in insurance subsidiaries or alternative approaches, as discussed in [Basel Framework SCO30.5]. - Any surplus capital in insurance subsidiaries recognised when calculating the D-SIB's capital adequacy (see [Basel Framework SCO30.6].					
	Part 4 - CRA – General qualitative information about credit risk	Annual				
	Banks must describe their risk management objectives and policies for credit risk, focusing in particular on:	Annual				
(a)	How the business model translates into the components of the bank's credit risk profile.	Annual	79-80, 83, 88-91			
(b)	Criteria and approach used for defining credit risk management policy and for setting credit risk limits.	Annual	81-82, 88-91			
(c)	Structure and organization of the credit risk management and control function.	Annual	76-81, 88-91			
(d)	Relationships between the credit risk management, risk control, compliance and internal audit functions.	Annual	76-81			
(e)	Scope and main content of the reporting on credit risk exposure and on the credit risk management function to the executive management and to the board of directors.	Annual	76-81, 88-91			
	Part 4 - CRB – Additional disclosure related to the credit quality of assets	Annual				
	Banks must provide the following disclosures:					
	Qualitative disclosures	Annual				
(a)	The scope and definitions of “past due” and “impaired” exposures used for accounting purposes and the differences, if any, between the definition of past due and default for accounting and regulatory purposes. When the accounting framework is IFRS 9, “impaired exposures” are those that are considered “credit-impaired” in the meaning of IFRS 9 Appendix A. When the accounting framework is US GAAP, “impaired exposures” are those exposures for which credit losses are measured under ASC Topic 326 and for which the D-SIB has recorded a partial write-off/write-down.	Annual		154-167	Overview	
(b)	The extent of past-due exposures (more than 90 days) that are not considered to be impaired and the reasons for this.	Annual		197		
(c)	Description of methods used for determining accounting provisions for credit losses. In addition, banks that have adopted an ECL accounting model must provide information on the rationale for categorization of ECL accounting provisions in general and specific categories for standardized approach exposures.	Annual		154-167 193-194	CR1	
(d)	The bank's own definition of a restructured exposure.–D-SIBs should disclose the definition of restructured exposures they use (which may be a definition from the local accounting or regulatory framework).	Annual		154-167 206		
	Quantitative disclosures	Annual				
(e)	Breakdown of exposures by geographical areas, industry and residual maturity;	Annual				
	(i) Geography	Annual	123, 126	188- 197, 225-226		
	(ii) Industry	Annual	125			
	(iii) Residual Maturity	Annual	126	190-192		

Summary of Qualitative Requirements - Pillar III (Cross Referenced)

Item #	Pillar III - Requirements - Qualitative	Frequency	2025 Annual Report: MD&A	2025 Annual Report: Financial Statements	Regulatory Capital Supplementary Package	Financial Reporting Supplementary Package
Page Reference						
(f)	Amounts of impaired exposures (according to the definition used by the bank for accounting purposes) and related allowances and write-offs, broken down by geographical areas and industry;	Annual				
	(i) Geography	Annual			Impaired by Region	
	(ii) Industry	Annual			Impaired by Industry	
(g)	Ageing analysis of accounting past-due exposures	Annual		197		
(h)	Breakdown of restructured exposures between impaired and not impaired	Annual		188-197		
Part 4 - Table CRC: Qualitative disclosure requirements related to credit risk mitigation techniques		Annual				
Banks must disclose:		Annual				
(a)	Core features of policies and processes for, and an indication of the extent to which the bank makes use of, on- and off-balance sheet netting.	Annual	89-91	184		
(b)	Core features of policies and processes for collateral evaluation and management.	Annual	88-91	177-178		
(c)	Information about market or credit risk concentrations under the credit risk mitigation instruments used (ie by guarantor type, collateral and credit derivative providers).	Annual	88-91	177-178, 184, 223-224		
Part 4 - CRD: Qualitative disclosures on banks' use of external credit ratings under the standardized approach for credit risk		Annual				
A. For portfolios that are risk-weighted under the standardized approach for credit risk, banks must disclose the following information:		Annual				
(a)	Names of the external credit assessment institutions (ECAIs) and export credit agencies (ECAs) used by the bank, and the reasons for any changes over the reporting period.	Annual		227-228		
(b)	The asset classes for which each ECAI or ECA is used.	Annual	68-69	227-228	EAD RWA	
(c)	A description of the process used to transfer the issuer to issue credit ratings onto comparable assets in the banking book (see [CAR 2023, Chapter 4, Section 4.2.3.3, paragraph 180-182]).	Annual	68-69			
(d)	The alignment of the alphanumerical scale of each agency used with risk buckets (except where the relevant supervisor publishes a standard mapping with which the bank has to comply).	Annual	68-69			
Part 4 - CRE: Qualitative disclosures related to IRB models		Annual				
Banks must provide the following information on their use of IRB models:		Annual				
(a)	Internal model development, controls and changes: role of the functions involved in the development, approval and subsequent changes of the credit risk models.	Annual	69-72, 89-91			
(b)	Relationships between risk management function and internal audit function and procedure to ensure the independence of the function in charge of the review of the models from the functions responsible for the development of the models.	Annual	69-72, 89-91			
(c)	Scope and main content of the reporting related to credit risk models.	Annual	69-71	224-228	Overview	
(d)	Scope of the supervisor's acceptance of approach.	Annual	69-71			
(e)	For each of the portfolios, the bank must indicate the part of EAD within the group (in percentage of total EAD) covered by standardized, FIRB and AIRB approach and the part of portfolios that are involved in a roll-out plan.	Annual	69-71		Overview	EAD RWA

Summary of Qualitative Requirements - Pillar III (Cross Referenced)

Item #	Pillar III - Requirements - Qualitative	Frequency	2025 Annual Report: MD&A	2025 Annual Report: Financial Statements	Regulatory Capital Supplementary Package	Financial Reporting Supplementary Package
			Page Reference			
(f)	The number of key models used with respect to each portfolio, with a brief discussion of the main differences among the models within the same portfolios.	Annual	69-71	224-228		
(g)	Description of the main characteristics of the approved models: (i) definitions, methods and data for estimation and validation of PD (e.g. how PDs are estimated for low default portfolios; if there are regulatory floors; the drivers for differences observed between PD and actual default rates at least for the last three periods); and where applicable: (ii) LGD (e.g. methods to calculate downturn LGD; how LGDs are estimated for low default portfolios; the time lapse between the default event and the closure of the exposure); (iii) credit conversion factors, including assumptions employed in the derivation of these variables.	Annual	68-72	224-228		
Part 5 - CCRA: Qualitative disclosure related to counterparty credit risk		Annual				
Banks must provide:		Annual				
(a)	The method used to assign the operating limits defined in terms of internal capital for counterparty credit exposures and for CCP exposures.	Annual	81-84, 89-91	177-178		
(b)	Policies relating to guarantees and other risk mitigants and assessments concerning counterparty risk, including exposures towards CCPs.	Annual	81-84, 89-91	177-178		
(c)	Policies with respect to wrong-way risk exposures.	Annual	89-91			
(d)	The impact in terms of the amount of collateral that the bank would be required to provide given a credit rating downgrade.	Annual	89-91			
Part 5 - CVAA: General qualitative disclosure requirements related to CVA		Annual				
A bank must describe their risk management objectives and policies for CVA risk as follows:		Annual				
(a)	An explanation and/or a description of the D-SIB's processes implemented to identify, measure, monitor and control the D-SIB's CVA risks, including policies for hedging CVA risk and the processes for monitoring the continuing effectiveness of hedges.	Annual	98, 101			
(b)	Whether the bank is eligible and has chosen to set its capital requirement for CVA at 100% of the bank's capital requirement for counterparty credit risk as applicable under [CAR 2024, Chapter 8, paragraph 9].	Annual	72			
Part 5 - CVAB: Qualitative disclosures for banks using the SA-CVA		Annual				
D-SIBs must provide the following information on their CVA risk management framework:		Annual				
(a)	A description of the D-SIB's CVA risk management framework.	Annual	98, 101			
(b)	A description of how senior management is involved in the CVA risk management framework.	Annual	98, 101			
(c)	An overview of the governance of the CVA risk management framework (eg documentation, independent control unit, independent review, independence of the data acquisition from the lines of business).	Annual	98, 101			
Part 6 - SECA: Qualitative disclosure requirements related to securitization exposures		Annual				
Qualitative disclosures		Annual				

Summary of Qualitative Requirements - Pillar III (Cross Referenced)

Item #	Pillar III - Requirements - Qualitative	Frequency	2025 Annual Report: MD&A	2025 Annual Report: Financial Statements	Regulatory Capital Supplementary Package	Financial Reporting Supplementary Package
			Page Reference			
	Banks must describe their risk management objectives and policies for securitization activities and main features of these activities according to the framework below. If a bank holds securitization positions reflected both in the regulatory banking book and in the regulatory trading book, the bank must describe each of the following points by distinguishing activities in each of the regulatory books.	Annual				
	(a) The bank's objectives in relation to securitization and re-securitization activity, including the extent to which these activities transfer credit risk of the underlying securitized exposures away from the bank to other entities, the type of risks assumed and the types of risks retained.	Annual	73-74, 118-119	198-200		
	(b) The bank must provide a list of:	Annual				
	• special purpose entities (SPEs) where the bank acts as sponsor (but not as an originator such as an Asset Backed Commercial Paper (ABCP) conduit), indicating whether the bank consolidates the SPEs into its scope of regulatory consolidation. A bank would generally be considered a "sponsor" if it, in fact or in substance, manages or advises the programme, places securities into the market, or provides liquidity and/or credit enhancements. The programme may include, for example, ABCP conduit programmes and structured investment vehicles.	Annual	73-74	198-200		
	• affiliated entities (i) that the bank manages or advises and (ii) that invest either in the securitization exposures that the bank has securitized or in SPEs that the bank sponsors.	Annual	73-74	198-200		
	• a list of entities to which the bank provides implicit support and the associated capital impact for each of them (as required in [CAR 2023, Chapter 6, Section 6.2.1.8, paragraph 17] and [CAR 2023, Chapter 6, Section 6.8, paragraph 148]).	Annual	n/a			
	(c) Summary of the bank's accounting policies for securitization activities.	Annual	73-74, 118-119	198-200		
	(d) If applicable, the names of external credit assessment institution (ECAIs) used for securitizations and the types of securitization exposure for which each agency is used.	Annual			Overview	
	(e) If applicable, describe the process for implementing the Basel internal assessment approach (IAA). The description should include:	Annual			Overview	
	• Structure of the internal assessment process and relation between internal assessment and external ratings, including information on ECAIs as referenced in item (d) of this table.	Annual			Overview	
	• Control mechanisms for the internal assessment process including discussion of independence, accountability, and internal assessment process review	Annual			Overview	

Summary of Qualitative Requirements - Pillar III (Cross Referenced)

Item #	Pillar III - Requirements - Qualitative	Frequency	2025 Annual Report: MD&A	2025 Annual Report: Financial Statements	Regulatory Capital Supplementary Package	Financial Reporting Supplementary Package
			Page Reference			
	The exposure type to which the internal assessment process is applied; and stress factors used for determining credit enhancement levels, by exposure type. For example, credit cards, home equity, auto, and securitisation exposures detailed by underlying exposure type and security type (eg residential mortgage-backed securities, commercial mortgage-backed securities, asset-backed securities, collateralised debt obligations) etc.	Annual			Overview	
	(f) Banks must describe the use of internal assessment other than for IAA capital purposes.	Annual	n/a			
	Part 7 - MRA: Market risk					
	A bank must describe their risk management objectives and policies for market risk according to the framework as follows:	Annual				
	(a) Strategies and processes of the D-SIB, which must include an explanation and/or a description of:	Annual				
	The D-SIB’s strategic objectives in undertaking trading activities, as well as the processes implemented to identify, measure, monitor and control the D-SIB’s market risks, including policies for hedging risk and the strategies/processes for monitoring the continuing effectiveness of hedges.	Annual	97-101			
	Policies for determining whether a position is designated as trading, including the definition of stale positions and the risk management policies for monitoring those positions. In addition, D-SIBs should describe cases where instruments are assigned to the trading or banking book contrary to the general presumptions of their instrument category and the market and gross fair value of such cases, as well as cases where instruments have been moved from one book to the other since the last reporting period, including the gross fair value of such cases and the reason for the move.	Annual	97-101			
	Description of internal risk transfer activities, including the types of internal risk transfer desk [CAR 2024, Chapter 9, Section 9.2].	Annual	97-101			
	(b) The structure and organisation of the market risk management function, including a description of the market risk governance structure established to implement the strategies and processes of the D-SIB discussed in row (a) above.	Annual	97-101			
	(c) The scope and nature of risk reporting and/or measurement systems.	Annual	97-101			
	Part 7 - MRB: Market risk					
	(A) A bank must provide a general description of the trading desk structure (as defined in CAR 2024, Chapter 9, paragraphs 52 to 57) and types of instruments included in the IMA trading desks.	Annual	N/A			
	(B) For ES models, banks must provide the following information:	Annual	N/A			
	(a) A description of trading desks covered by the ES models. Where applicable, D-SIBs must also describe the main trading desks not included in ES regulatory calculations (due to lack of historical data or model constraints) and treated under other measures (such as specific treatments allowed in some jurisdictions).	Annual	N/A			
	(b) The soundness criteria on which the internal capital adequacy assessment is based (eg forward-looking stress testing) and a description of the methodologies used to achieve a capital adequacy assessment that is consistent with the soundness standards.	Annual	N/A			
	(c) A general description of the ES model(s). For example, D-SIBs may describe whether the model(s) is (are) based on historical simulation, Monte Carlo simulations or other appropriate analytical methods, and the observation period for ES based on stressed observations (ESR,S).	Annual	N/A			
	(d) The frequency by which model data is updated.	Annual	N/A			
	(e) A description of the ES calculation based on current and stressed observations. For example, D-SIBs should describe the reduced set of risk factors used to calibrate the period of stress, the share of the variations in the full ES that is explained by the reduced set of risk factors, and the observation period used to identify the most stressful 12 months.	Annual	N/A			

Summary of Qualitative Requirements - Pillar III (Cross Referenced)

Item #	Pillar III - Requirements - Qualitative	Frequency	2025 Annual Report: MD&A	2025 Annual Report: Financial Statements	Regulatory Capital Supplementary Package	Financial Reporting Supplementary Package
Page Reference						
(C)	SES		N/A			
(a)	A general description of each methodology used to achieve a capital assessment for categories of NMRFs that is consistent with the required soundness standard.	Annual	N/A			
(D)	A bank using internal models to determine the DRC must provide the following information:	Annual	N/A			
(a)	A general description of the methodology: Information about the characteristics and scope of the value-at-risk (VaR) and whether different models are used for different exposure classes. For example, D-SIBs may describe the range of probability of default (PD) by obligors on the different types of positions, the approaches used to correct market-implied PDs as applicable, the treatment of netting, basis risk between long and short exposures of different obligors, mismatch between a position and its hedge and concentrations that can arise within and across product classes during stressed conditions.	Annual	N/A			
(b)	The methodology used to achieve a capital assessment that is consistent with both the required soundness standard and [CAR 2024, Chapter 9, paragraphs 378 to 399].	Annual	N/A			
(E)	Validation of models and modelling processes:	Annual	N/A			
(a)	The approaches used in the validation of the models and modelling processes, describing general approaches used and the types of assumptions and benchmarks on which they rely.	Annual	N/A			
Part 8 - Operational risk		Annual				
	The bank must describe:	Annual	72, 112-113			
(a)	The policies, frameworks and guidelines for the management of operational risk.		72, 112-113			
(b)	The structure and organisation of their operational risk management and control function.		72, 112-113			
(c)	The operational risk measurement system (ie the systems and data used to measure operational risk in order to estimate the operational risk capital charge).		72, 112-113			
(d)	The scope and main context of their reporting framework on operational risk to executive management and to the board of directors.		72, 112-113			
(e)	The risk mitigation and risk transfer used in the management of operational risk. This includes mitigation by policy such as the policies on risk culture, risk appetite, and outsourcing), by divesting from high-risk businesses, and by the establishment of controls. The remaining exposure can then be absorbed by the bank or transferred. For instance, the impact of operational losses can be mitigated with insurance.		72, 112-113			
Part 9 - Interest rate risk in the banking book (IRRBB)		Annual				
(a)	The general qualitative disclosure requirement (paragraph 824), including the nature of IRRBB and key assumptions, including assumptions regarding loan prepayments and behaviour of non-maturity deposits, and frequency of IRRBB measurement.	Annual	99

- (1) This table incorporates the BCBS Technical Amendments to Pillar 3 disclosure requirements - regulatory treatment of accounting provisions (August 2018). Consistent with the requirements for regulatory capital reporting and in accordance with OSFI Capital Adequacy Requirements (Chapter 2), General Allowances are defined as Stage 1 and Stage 2 allowances under IFRS 9 and Specific Allowances are defined as Stage 3 allowances under IFRS 9.
- (2) The accounting value of on- and off-balance sheet exposures before any credit conversion factor (CCF) or credit risk mitigation (CRM), but after considering write-offs.
- (3) Defaulted exposures include: (i) the Bank's reported Gross Impaired Loans, (ii) credit cards which meet the regulatory definition of default, and (iii) off-balance sheet commitments, LCs and/or LGs which meet the regulatory definition of default.
- (4) Includes all three ECL Stages, net of allowances related to securitizations of bank originated exposures and ECL related to entities outside the scope of regulatory consolidation.
- (5) Includes bankers acceptances and deposits with banks.
- (6) Excludes all revocable loan commitments.

CR2: Changes in stock of defaulted loans and debt securities ⁽¹⁾					
(in \$ millions)		a	a ₂	a ₃	a ₄
		Q2 2026	Q1 2026	Q4 2025	Q3 2025
1	Defaulted loans and debt securities - at the end of the previous reporting period ⁽²⁾	7,216	7,391	7,062	7,097
2	Loans and debt securities that have defaulted since the last reporting period	2,662	2,611	2,483	2,447
3	Returned to non-defaulted status ⁽³⁾	(1,132)	(1,380)	(1,181)	(1,345)
4	Amounts written off	(1,099)	(1,096)	(1,135)	(1,125)
5	Other changes ⁽⁴⁾	93	(310)	162	(12)
6	Defaulted loans and debt securities --at the end of the reporting period (1 + 2 - 3 - 4 + 5) ⁽²⁾	7,740	7,216	7,391	7,062

(1) Defaulted exposures include: (i) the Bank's reported Gross Impaired Loans, (ii) credit cards which meet the regulatory definition of default, and (iii) off-balance sheet commitments, LCs and/or LGs which meet the regulatory definition of default.

(2) Regulatory Definition of Default: when there is objective evidence that the Bank no longer has reasonable assurance as to the timely collection of interest and principal, or where a contractual payment is 90 days in arrears (180 days in arrears for credit cards), or the customer is declared to be bankrupt.

(3) Includes returned to non-defaulted status and payments on defaulted accounts.

(4) Includes the impact from foreign currency translation and changes to off-balance sheet exposures which meet the regulatory definition of default.

(1) Exposure amount used for the calculation of capital requirements, including both on- and off-balance sheet amounts, net of allowances (ECL Stage 3) and write-offs.
The amounts are after application of credit risk mitigation (CRM) techniques and credit conversion factors (CCF). Includes CRM adjustments to exposures based on the application of the Comprehensive Approach for collateral, excluding Counterparty Credit Risk, Equity Investment in Funds, Securitization and risk-weighted threshold deductions.

CR5: Standardized approach – exposure amounts and CCFs applied to off-balance sheet exposures ⁽¹⁾					
Risk weight (in \$ millions)	a	b	c	d	
	On-balance sheet exposure	Off-balance sheet exposure (pre-CCF)	Weighted average CCF ⁽²⁾	Exposure (post-CCF and post-CRM) ⁽³⁾

(1) Exposure amount excludes Counterparty Credit Risk, Equity Investment in Funds, Securitization and risk-weighted threshold deductions.

(2) Weighting is based on off-balance sheet exposure (pre-CCF).

(3) Exposure post CRM also includes deductions for collateral under Comprehensive Approach.

(1) Excludes the retail residential mortgage exposures insured by CMHC, Sagen and Canada Guaranty Insurance, which are included in Non-Retail.

(2) Post-CRM PD weighted by post-CRM EAD.

(3) Number of obligors represents the number of retail accounts.

(4) Post-CRM LGD weighted by post-CRM EAD.

(5) Average maturity is not used in RWA calculation for retail exposures.

(6) RWA density is calculated as Risk-weighted Assets (column i) divided by EAD post-CRM and post-CCF (column d).

(7) Includes all three ECL stages under IFRS 9.

(1) Includes retail residential mortgages insured by CMHC, and the backstop portion of mortgages insured by Sagen and Canada Guaranty Insurance.

(2) Post-CRM PD weighted by post-CRM EAD.

(3) Represents the number of individual borrowers.

(4) Post-CRM LGD weighted by post-CRM EAD.

(5) Effective remaining maturity in years.

(6) RWA density is calculated as Risk-weighted Assets (column i) divided by EAD post-CRM and post-CCF (column d).

(7) Includes all three ECL stages under IFRS 9, and partial write-offs.

(1) Includes the retail residential mortgages insured by Sagen and Canada Guaranty Insurance, excluding the backstop portion.

(2) Post-CRM PD weighted by post-CRM EAD.

(3) Represents the number of individual borrowers.

(4) Post-CRM LGD weighted by post-CRM EAD.

(5) Effective remaining maturity in years.

(6) RWA density is calculated as Risk-weighted Assets (column i) divided by EAD post-CRM and post-CCF (column d).

(7) Includes all three ECL stages under IFRS 9, and partial write-offs.

(8) Includes purchased receivables portfolio totaling \$2.3 billion EAD, \$0.2 billion RWA (\$2.3 billion EAD, \$0.4 billion RWA in Q1 2026; \$2.1 billion EAD, \$0.3 billion RWA in Q4 2025).

(1) Organic changes in book size and composition (including origination of new businesses and maturing loans) excluding acquisitions and disposal of entities.

(2) Changes in the assessed quality of the bank's assets due to changes in borrower risk, such as rating grade migration, parameter recalibration, or similar effects.

(3) Changes due to model implementation, changes in model scope, or any changes intended to address model weaknesses.

(4) Changes due to methodological changes in calculations driven by regulatory policy changes, including both revisions to existing regulations and new regulations.

(5) Changes in book size due to acquisitions and/or divestitures.

(6) Changes driven by market movements such as foreign exchange movements.

(7) This category captures changes that cannot be attributed to any other category.

(1) Represents AIRB exposures for Derivatives and SFT.

(2) Post-CRM PD weighted by post-CRM EAD.

(3) Post-CRM LGD weighted by post-CRM EAD.

(4) Effective remaining maturity in years.

(5) RWA density is calculated as Risk-weighted Assets (column f) divided by EAD post-CRM (column a).

(1) Represents FIRB exposures for Derivatives and SFT.

(2) Post-CRM PD weighted by post-CRM EAD.

(3) Post-CRM LGD weighted by post-CRM EAD.

(4) Effective remaining maturity in years.

(5) RWA density is calculated as Risk-weighted Assets (column f) divided by EAD post-CRM (column a).

8	Other ⁽⁸⁾	-	-	-	-
9	RWA as at end of current reporting period	7,525	7,234	6,798	6,222

(1) Includes exposures under IMM cleared through a CCP.

(2) Organic changes in book size and composition (including origination of new businesses) excluding acquisitions and disposal of entities.

(3) Changes in the assessed quality of the bank's assets due to changes in borrower risk, such as rating grade migration, parameter recalibrations, or similar effects.

(4) Changes due to model implementation, changes in model scope, or any changes intended to address model weaknesses.

(5) Changes due to methodological changes in calculations driven by changes in regulatory policy and/or regulatory oversight including interpretation.

(6) Changes in book size from acquisitions and/or divestitures.

(7) Changes driven by market movements such as foreign exchange movements.

(8) This category captures changes that cannot be attributed to any other category.

(1) Includes on balance sheet cash amounts related to crypto exposures for repo and reverse repo transactions. Note that for regulatory CCR capital purposes, Group 2 crypto related securities are treated as non-eligible collateral following the Comprehensive Approach under Chapter 4 of OSFI Guideline - Capital Adequacy Requirements (November 2025). Received Group 2B collateral is fully derecognized and not subject to further capital deductions.

(1) Retained positions where the Bank acts as sponsor include exposures to commercial paper conduits to which the bank provides liquidity facilities.

(2) Retained positions where the Bank acts as an investor are the investment positions purchased in third-party deals.

(3) Excludes mortgage-backed securities that do not involve the tranching of credit risk (e.g. NHA MBS) which are not considered securitizations as per OSFI Capital Adequacy Requirements Guideline, Chapter 6, paragraph 3.

- (1) Based on the exposure location of ultimate risk. The list includes jurisdictions, which have set a countercyclical capital buffer greater than zero.
- (2) The current buffer in place in the jurisdiction.
- (3) Risk-Weighted Assets amount attributed to the private sector credit exposures. The risk-weighted equivalent capital charge in the trading book is immaterial at the reporting period.
- (4) Based on the geographic weight of the RWA amount in the jurisdictions divided by the total RWA amount.
- (5) Amount of Common Equity Tier 1 capital held to meet the countercyclical capital buffer requirement, calculated as the consolidated countercyclical capital buffer rate times the consolidated total RWA amount (as used in the calculation of all risk-based capital ratios).

8	RWA for CVA as at end of reporting period	5,219	5,490	5,394	5,202

(1) Changes in movement of trades between SA-CVA and BA-CVA , new business added excluding acquisitions and divestitures.

(2) Changes in risk due to position changes and market movements including credit rating migration, etc. Foreign exchange movements are embedded within Movements in Risk Levels.

(3) Changes due to risk sensitivity changes originating from enhancements to the CVA model, CVA capital process changes.

(4) Changes due to methodological changes in calculations driven by regulatory policy changes, including both revisions to existing regulations and new regulations.

(5) Changes in book size due to acquisitions and/or divestitures.

(6) This category captures changes that cannot be attributed to any other category.

Total	17.0	17.0	17.1	16.9	17.1

(1) For purposes of this presentation only, Risk-weighted Assets (RWA) are shown by balance sheet categories. Details by Basel III exposure type are shown on tab EAD_RWA (page 6), "Exposure at Default and Risk-Weighted Assets for Credit Risk Portfolios".

(2) The Bank is subject to capital floor requirements as prescribed in OSFI's CAR Guidelines. Total RWA is increased by a floor adjustment amount, which is calculated based on the Standardized methodologies.

Movement of Risk-Weighted Assets by Risk Type

Credit Risk RWA (in \$ millions)	Q2 2026		Q1 2026	
	Credit Risk	Of which Counterparty Credit Risk	Credit Risk	Of which Counterparty Credit Risk
Credit risk-weighted assets as at beginning of Quarter	404,215	23,850	406,256	24,250
Book size ⁽¹⁾	(2,791)	(17)	3,518	154
Book quality ⁽²⁾	(4)	(48)	1,532	11
Model updates ⁽³⁾	4,515	115	2,207	119
Methodology and policy ⁽⁴⁾	-	-	3,419	58
Acquisitions and disposals	-	-	(10,293)	(126)
Foreign exchange movements	(1,522)	(17)	(2,424)	(616)
Other	-	-	-	-
Credit risk-weighted assets as at end of Quarter	404,413	23,883	404,215	23,850

(1) Book size is defined as changes in volumes and composition (including new business and maturing loans).

(2) Changes in the assessed quality of the bank's assets due to changes in borrower risk, such as rating grade migration, parameter recalibration, or similar effects.

(3) Model updates are defined as model implementation, change in model scope or any change to address model enhancement.

(4) Methodology and policy is defined as methodology changes to the calculations driven by regulatory policy changes, such as new regulation (Revised Basel III), including regulatory interpretation.

Market Risk RWA (in \$ millions)	Q2 2026	Q1 2026
Market risk-weighted assets as at beginning of Quarter	13,046	12,786
Movement in risk levels ⁽¹⁾	(1,015)	2,513
Model updates ⁽²⁾	-	-
Methodology and policy ⁽³⁾	-	(2,253)
Acquisitions and disposals	-	-
Other	-	-
Market risk-weighted assets as at end of Quarter	12,031	13,046

(1) Movement in risk levels is defined as changes in risk due to position changes and market movements. Foreign exchange movements are embedded within Movement in risk levels.

(2) Model updates are defined as updates to the model to reflect recent experience and change in model scope.

(3) Methodology and policy is defined as methodology changes to the calculations driven by regulatory policy changes (e.g. Basel III FRTB).

Operational Risk RWA (in \$ millions)	Q2 2026	Q1 2026
Operational risk-weighted assets as at beginning of Quarter	56,992	55,411
Acquisitions and disposals	-	-
Higher Revenue	1,118	982
Methodology and policy ⁽¹⁾	-	-
ILM changes	(114)	599
Operational risk-weighted assets as at end of Quarter	57,996	56,992

(1) Methodology and policy is defined as methodology changes to the calculations driven by regulatory policy changes, such as new regulation (Revised Basel III), including regulatory interpretation.

(1) IRB Exposure at default is after credit risk mitigation. Standardized Exposure at default is after related IFRS 9 (Stage 3) allowances for credit losses, and also includes the collateral impact under the Comprehensive Approach. This excludes equity investment securities and other assets.

(2) Geographic segmentation is based upon the location of the ultimate risk of the credit exposure.

(3) Includes off-balance sheet lending instruments such as letters of credit and letters of guarantee, OTC derivatives, securitization and repo-style transactions net of related collateral.

(1) Before credit risk mitigation, excluding equity investment securities and other assets.

(2) Remaining term to maturity of the credit exposure.

(3) Off-balance sheet lending instruments such as letters of credit and letters of guarantee, securitization, derivatives and repo-style transactions net of related collateral.

(4) Credit cards and lines of credit with unspecified maturity.

- (1) Non-retail actual loss rates represent the credit losses net of recoveries for the current and prior three quarters divided by the 5-point average of outstanding loan balances for the same four-quarter period beginning 12 months ago. Expected loss rates represent the expected losses that were predicted at the beginning of the four-quarter period divided by outstanding loan balances at the beginning of the four-quarter period.
- (2) Retail actual loss rates represent write-offs net of recoveries for the current and prior three quarters divided by the 5-point average of outstanding loan balances for the same four-quarter period beginning 12 months ago. Expected loss rates represent the expected losses that were predicted at the beginning of the four-quarter period divided by outstanding loan balances at the beginning of the four-quarter period.
- (3) Expected losses are calculated using "through the business cycle" Basel risk parameters (PD, LGD, and EAD) on IRB portfolio, which are estimated to include a long term time horizon. Actual losses are a "point in time" representation and reflect the current economic conditions. During an economic downturn PCL on impaired loans may exceed expected losses, and may fall below expected losses during times of economic growth.
- (4) Expected Losses are as reported 12 month prior. Starting Q2, 2024 classification of Expected Losses are based on revised Basel III reforms. Corporate includes, Corporates (Large, Mid-Size, SME), and other Corporates; Sovereign includes Sovereign, PSEs and MDBs; Banks include Bank, and other Financial Institutions. This is consistent with the definition on EAD_RWA page.

Estimated and Actual Loss Parameters - Non-Retail and Retail AIRB Portfolios

Exposure Type	Q2 2026						Q1 2026					
	Average estimated PD %	Actual default rate %	Average estimated LGD %	Actual LGD %	Average estimated CCF ⁽²⁾ %	Actual CCF ⁽²⁾ %	Average estimated PD %	Actual default rate %	Average estimated LGD %	Actual LGD %	Average estimated CCF ⁽²⁾ %	Actual CCF ⁽²⁾ %
Non-Retail ⁽¹⁾	0.93	0.49	41.89	31.83	58.78	45.06	0.87	0.51	41.82	24.08	50.00	47.86

(1) Reporting is on a one quarter lag basis. For reporting as of Q2/26, estimated parameters are based on portfolio count-weighted averages at Q1/25 whereas actual parameters are based on count-weighted averages of realized parameters during the subsequent four quarters (Q2/25 – Q1/26).

(2) EAD back-testing is performed through Limit Factor (LF) back-testing, as EAD is computed using the total limit multiplied by the estimated LF.

(in \$ millions)	Four-quarter period ending Q2 2026 ⁽¹⁾⁽²⁾						Four-quarter period ending Q1 2026 ⁽¹⁾⁽²⁾

Other retail	2.08	1.61	64.74	54.78	11	10	2.11	1.55	64.63	54.47	12	11

(1) Estimated values are based on the models in place four quarters prior to the reporting date.

(2) Actual values are aligned with model updates implemented during the period.

(3) Account weighted aggregation.

(4) Default weighted aggregation.

(5) EAD is estimated for revolving products only.

(6) Actual based on accounts not at default as at four quarters prior to reporting date.

(7) Actual LGD calculated based on a 36 month recovery period for BNS Residential Real Estate Secured and 24 months otherwise; recoveries received after the period is complete are excluded.

(8) Actual and estimated LGD for insured mortgages are not shown; actual LGD includes the insurance benefit, whereas estimated LGD may not.

(1) The impact of Master Netting Agreements and Collateral has been incorporated within the various contracts. As a result, risk-weighted assets are reported net of impact of collateral and master netting arrangements.

(2) Includes derivative exposures cleared through CCPs. Excludes risk-weighted assets for default fund contributions to a CCP.

Glossary	
Credit Risk Parameters	
Exposure at Default (EAD)	Generally represents the expected gross exposures at default and includes outstanding amounts for on-balance sheet exposures and loan equivalent amounts for off-balance sheet exposures.
Probability of Default (PD)	Measures the likelihood that a borrower will default within a 1-year time horizon, expressed as a percentage.
Loss Given Default (LGD)	Measures the severity of loss on a facility in the event of a borrower's default, expressed as a percentage of exposure at default.
Exposure Types	
Non-retail	
Corporate	Debt obligation of a corporation, partnership, or proprietorship.
Bank	Debt obligation of a bank or bank equivalent (including certain public sector entities (PSEs) treated as Bank equivalent exposures).
Sovereign	Debt obligation of a sovereign, central bank, certain Multilateral Development Banks (MDBs) and certain PSEs treated as Sovereign.
Securitization	On-balance sheet investments in asset backed securities (ABS), mortgage backed securities (MBS), collateralized loan obligations (CLOs) and collateralized debt obligations (CDOs). Off-balance sheet liquidity lines include credit enhancements to Bank's sponsored ABCP conduits and liquidity lines to non-bank sponsored ABCP conduits.
Retail	
Real Estate Secured	
Residential Mortgages	Loans to individuals against residential property (four units or less).
Secured Lines Of Credit	Revolving personal lines of credit secured by first charge on residential real estate.
Qualifying Revolving Retail Exposures (QRRE)	Credit cards and unsecured line of credit for individuals.
Other Retail	All other personal loans, including Small Business Enterprise treated as Other Retail under regulatory disclosure requirements.
Exposure Sub-types	
Drawn	
Undrawn	
Repo-Style Transactions	Reverse repurchase agreements (reverse repos) and repurchase agreements (repos), securities lending and borrowing.
Over-the-counter (OTC) Derivatives	Over-the-counter derivatives contracts.
Exchange-traded derivatives (ETD)	Derivative contracts (e.g. futures contracts and options) that are transacted on an organized futures exchange. These include Futures contracts (both Long and Short positions), Purchased Options and Written Options.
Other Off-Balance Sheet	
Qualifying central counterparty (QCCP)	Direct credit substitutes such as standby letters of credits and guarantees, trade letters of credits, and performance letters of credits and guarantees. A qualifying central counterparty (QCCP) is licensed as a central counterparty and is also considered as “qualifying” when it is compliant with CPSS-IOSCO standards and is able to assist clearing member banks in properly capitalizing for CCP exposures by either undertaking the calculations and/or making available sufficient information to its clearing members, or others, to enable the completion of capital calculations.
Non-qualifying central counterparties (NQCCP)	Defined as those central counterparties which are not compliant with CPSS-IOSCO standards as outlined under qualifying CCP’s. The exposures to NQCCP will follow standardized treatment under the Basel accord.
Other	
Asset Value Correlation Multiplier (AVC)	Basel III has increased the risk-weights on exposures to certain Financial Institutions (FIs) relative to the non-financial corporate sector by introducing an Asset Value Correlation multiplier (AVC). The correlation factor in the risk-weight formula is multiplied by this AVC factor of 1.25 for all exposures to regulated FIs whose total assets are greater than or equal to CAD \$150 billion and all exposures to unregulated FIs.
Regulatory Capital Floor	Since the introduction of Basel II in 2008, OSFI has prescribed a minimum regulatory capital floor for institutions that use the advanced internal ratings-based approach for credit risk. Effective Q2 2023, the capital floor add-on is determined under the Revised Basel III Framework by comparing RWA generated for IRB and standardized portfolios to RWA calculated under a standardized approach at the required capital floor calibration. A shortfall to the capital floor RWA requirement is added to the Bank’s RWA.
Specific Wrong-Way Risk (WWR)	Specific Wrong-Way Risk arises when the exposure to a particular counterparty is positively correlated with the probability of default of the counterparty due to the nature of the transactions with the counterparty.
Credit Valuation Adjustment (CVA)	Credit Valuation Adjustment (CVA) is the difference between the risk free value of a portfolio and the true value of that portfolio, accounting for the possible default of a counterparty. CVA adjustment aims to identify the impact of Counterparty Risk.
